## **1.0 INTRODUCTION**

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the period of 7-9 December 1992, Fourth Quarter 1992.

## **2.0 QUARTERLY MONITORING PROGRAM**

Fourth Quarter 1992 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 7 December 1992 prior to initiating purging of groundwater from any observation wells. However, several of the water levels measurements were anomalous due an equipment malfunction. Water level measurements were repeated on 6 January 1993.

Groundwater samples were collected from the following wells and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240:

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Table 2 summarizes the results of chemical analysis of groundwater samples and duplicates. Table 3 summarizes available measured groundwater elevations to date. Copies of laboratory data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, and C, respectively.

### **2.1 Groundwater Sampling Procedures**

Prior to collecting groundwater samples from each well, groundwater was purged by using an electrical submersible pump that was temporarily installed into the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding readings: pH, electrical conductivity, temperature and clarity. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the submersible pump was removed from the well and a representative groundwater sample was collected using a steam-cleaned stainless steel point-source bailer equipped with top and bottom ball-check valves. The bailer was lowered to the approximate mid-point of the saturated well screen interval and retrieved to ground surface. The contents of the bailer were discharged into four labelled 40-ml capacity vials and preserved with HCL.

## 2.2 Field QA/QC Procedures

One blind duplicate groundwater sample was collected each day from selected observation wells for Quality Control purposes. Duplicates were collected in four HCL-preserved vials and identified by inserting the collection date after "DW-". For example, a duplicate sample collected on 7 December 1992 was identified as "DW-120792". No further sample identification was provided to the laboratory.

To verify that the groundwater samples were not exposed to analytes during storage and transportation to the analytical laboratory and that decontamination of sampling equipment was satisfactory to prevent cross-contamination of groundwater samples, trip blanks and field (equipment) blanks were chemically analyzed for VOCs. One trip blank was placed in the ice-cooled storage/transportation chest when the first groundwater sample was collected, and transported to the laboratory with the day's samples. Trip blanks were identified following a similar protocol to that used for duplicate water samples. For example, a trip blank prepared on 7 December 1992 was identified as "TB-120792".

Following decontamination of the bailer by steam-cleaning, and prior to collection of groundwater samples from successive wells, a field blank was prepared for laboratory analysis. Each field blank was prepared by pouring Reagent Grade II (Milli-Que) water, prepared by the analytical laboratory, through the bailer and discharge spigot and collecting the rinsate in one 40-ml vial preserved with HCL. Field blanks were identified following a similar protocol to that used for duplicate water samples. For example, a field blank prepared on 7 December 1992 was identified as "FB-120792". The wells sampled before and after field blank preparation were recorded.

All groundwater, duplicate, trip blank and field blank samples were transported in ice-cooled chests to West Coast Analytical Services, Inc. Santa Fe Springs, California using U.S. EPA-recommended Chain-of-Custody procedures.

## 3.0 EVALUATION OF ANALYTICAL RESULTS

### 3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 7 December 1992 or as noted above (Table 3 and Appendix B). An estimated potentiometric surface map for the shallow zone is presented as Figure 4. The groundwater gradient in the shallow zone was generally south-southeast with a southerly trough-like depression in the vicinity of observation wells WCC-7S and WCC-12S based on January 1992 measurements. Prior reports prepared by Woodward-Clyde Consultants (WCC, Phase II Report, May 1988; Phase III Report, March 1990) have indicated a generally southeast gradient direction, which is similar to current estimated conditions. Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone.

### 3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized on Table 2. Duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater sample. This table includes cumulative analytical data for all monitoring wells and includes detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate that TCE concentrations have increased from 28,000 micrograms per liter (ug/L) to 29,000 ug/L coming onto DAC's property. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE in the shallow zone upgradient well WCC-11S has decreased to 83 ug/L from 140 ug/L. TCE concentration in the upgradient well WCC-10S remained the same at 110 ug/L while the TCE concentration in well WCC-2S has increased from 110 ug/L to 140 ug/L. Only one additional chemical was detected for the first time in well WCC-6S (1,2-DCA at 80 ug/L). This is denoted by a double asterisk in table 2.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is in a generally southerly direction in the vicinity of buildings 36 and 41. Chemical concentration data from the eastern boundary observation wells (WCC-5S, WCC-9S and WCC-12S) are the same level of magnitude as upgradient "background level" wells (WCC-10S;, WCC-2S). Therefore, the data do not suggest chemical migration offsite from an onsite source.
- TCE and other VOC concentrations (Table 2), in samples collected from the two deeper zone wells (WCC-1D and WCC-3D), indicate an increase in chemical concentration in WCC-3D while chemical concentrations remained relatively unchanged in well WCC-1D.
- Low concentrations of Methylene Chloride were detected in all field and travel blanks at relatively low concentrations. Methylene Chloride is most likely a laboratory contaminant.

Date Analyzed: 12/16/92

## Abbreviations Summary

### General Reporting Abbreviations:

- B Blank - Indicates that the compound was found in both the sample and the blank. The sample value is reported without blank subtraction. If the sample value is less than 10X the blank value times the sample dilution factor, the compound may be present as a laboratory contaminant.
- D Indicates that the sample was diluted, and consequently the surrogates were too dilute to accurately measure.
- DL Detection Limit - Is the minimum value which we believe can be detected in the sample with a high degree of confidence, taking into account dilution factors and interferences. The reported detection limits are equal to or greater than Method Detection Limits (MDL) to allow for day to day and instrument to instrument variations in sensitivity.
- J Indicates that the value is an estimate.
- ND Not Detected - Indicates that the compound was not found in the sample at or above the detection limit.
- ppm parts per million (billion) in liquids is usually equivalent to mg/l (ug/l), or in solids to mg/kg (ug/kg). In the gas phase it is equivalent to ul/l (ul/m<sup>3</sup>).
- ppb
- TR Trace - Indicates that the compound was observed at a value less than our normal reported Detection Limit (DL), but we feel its presence may be important to you. These values are subject to large errors and low degrees of confidence.

kg kilogram	mg milligram	l liter	m meter
g gram	ug microgram	ul microliter	

### QC Abbreviations:

- Control Control Limits are determined from historical data for a QC parameter. The test value must be within this acceptable range for the test to be considered in control. Usually this range corresponds to the 99% confidence interval for the historical data.
- % Error Percent Error - This is a measure of accuracy based on the analysis of a Laboratory Control Standard (LCS). An LCS is a reference sample of known value such as an NIST Standard Reference Material (SRM). The % Error is expressed in percent as the difference between the known value and the experimental value, divided by the known value. The LCS may simply be a solution based standard which confirms calibration (ICV or CCV - initial or continuing calibration verification), or it may be a reference sample taken through preparation and analysis.

## GROUNDWATER SAMPLING RECORD

Facility Name DAC Date 12/7/92  
 Well Number UC-95 Well Depth 90 Well Diameter 4" Casing Material PVC  
 Sampling Crew MLW, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_  
 Type of Pump 4" Submersible Sampler SS bailed  
 Weather Conditions Rain

Time	Water Level	Pump	Volume Pumped (gal)	Pumping Rate (gpm)	Sample Collection	Temp (°C)	pH	Cond (uS)	Clarity
1634	66.56		5			19	8.20	1380	clear
1636			10			21	7.94	1230	"
1637			15			21	8.02	1180	"
1639			25			21	8.06	1190	"
1641			35			21	8.05	1182	"
1644			46			21	8.05	1180	"
end	<del>7:33</del>								

AIR MONITOR

$$3 \text{ Well Volumes} = 40 \text{ gal.} \quad (90 - 66.56) \times 0.65 \times 3 = 46 \text{ gal.}$$

Reference Well Volumes
2" well=0.16 gal/ft
4" well=0.65 gal/ft
6" well=1.5 gal/ft

## **GROUNDWATER SAMPLING RECORD**

Facility Name DAC Date 12/18/92

Well Number WCC-15 Well Depth 90.5 Well Diameter 4" Casing Material PVC

Sampling Crew MUN, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_

Type of Pump 4" Submersible Sampler SS basket

Weather Conditions Clear

$$3 \text{ Well Volumes} = 39 \text{ gal} \quad (905.70.15)(0.65)(3) = 39.75 \text{ gal.}$$

Reference Well  
Volumes

**GROUNDWATER SAMPLING RECORD**

Facility Name DAC Date 12-8-92

Well Number WCC-105 Well Depth 90 Well Diameter 4" Casing Material PVC

Sampling Crew MLW, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_

Type of Pump 4" Submersible Sampler SS ~~bait~~ baile

Weather Conditions Clear

$$3 \text{ Well Volumes} = 38 \text{ gal} \quad (90 - 70.62)(0.65)(3) = 37.8 \text{ gal}$$

Reference Well  
Volumes  
2" well=0.16 gal/ft  
4" well=0.65 gal/ft  
6" well=1.5 gal/ft

**GROUNDWATER SAMPLING RECORD**

Facility Name DAC Date 12-8-92  
Well Number WCC-115 Well Depth 90 Well Diameter 4" Casing Material PVC  
Sampling Crew MLW, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_  
Type of Pump 4" Submersible Sampler SS. barker  
Weather Conditions Clear

$$3 \text{ Well Volumes} = 42 \text{ gal} - (90 - 68.72)(0.05)(3) = 41.5 \text{ gal.}$$

Reference Well  
Volumes  
2" well=0.16 gal/ft  
4" well=0.65 gal/ft  
6" well=1.5 gal/ft

## **GROUNDWATER SAMPLING RECORD**

Facility Name DAC Date 12-8-92  
Well Number WCR-125 Well Depth 90 Well Diameter 4" Casing Material PVC  
Sampling Crew MLW, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_  
Type of Pump 4" Submersible Sampler SS boker  
Weather Conditions Clear

$$3 \text{ Well Volumes} = 45 \text{ gal.} \quad (90 - 67.08)(0.65)(3) = 44.7 \text{ gal.}$$

Reference Well
